GENERAL INFORMATION

Features

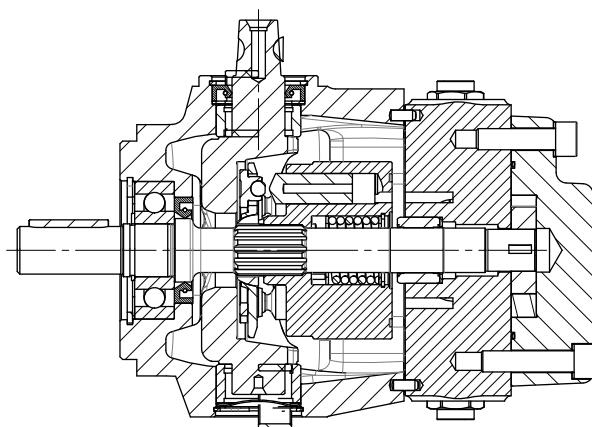

- Silent running
- High rotation speed
- Compact design
- Suitable for multiple pump assembly
- Easy maintenance
- Built-in pressure relief valves
- Optionals: screw or lever-type by-pass-valve, purge valve, adapter flange from SAE-A to SAE-B

- Accessories: auxiliary gearpumps, hydraulic and electric remote controls, mounting kit for diesel and petrol engines

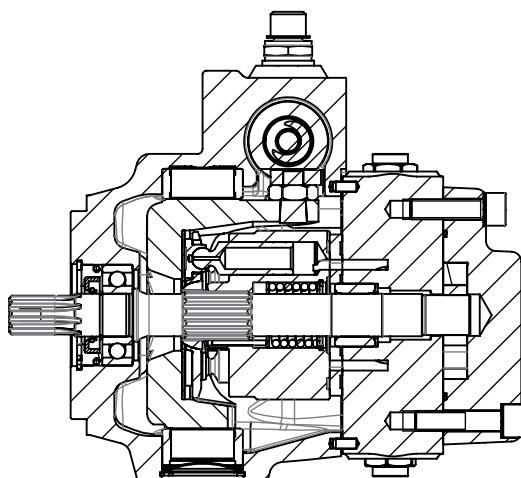

All HANSA-TMP's TPV pumps are tested dynamically and statically to ensure the quality of our product.

TPV pumps are variable displacement axial piston pumps, with swashplate system, for closed loop hydrostatic transmissions

Direct Mechanical Control

Hydraulic Servo Control

PERFORMANCE DIAGRAM

GENERAL INSTRUCTIONS

- During the assembly, check that pump is in line and concentric with the driveshaft sleeve to prevent overloading of the pump shaft bearing.
- Clean carefully all tanks and pipes internally before assembly.
- The pipe internal diameter must be suitable for the max oil speed through it.
- It is advisable to fit the pump below the oil level of tank.
- Heat exchangers must be considered in the machine design, to keep temperature level within the limit of 80°C.

Multiple Pumps

- In case of installing a multiple pump it is advisable to mount a supplementary support.

Maximum Shaft Torque

In the case of installation of multiple pump, verify that the total shaft torque is not more than the maximum value rated for each type of shaft.

Optional

The TPV pumps can be supplied in different versions, with different types of shaft and equipped with different types of control devices and optionals:

- Direct mechanical control lever DM
- Spring zero return DMS
- Hydraulic servo-control SHI
- Electric proportional servo-control SEI
- By-pass lever LB
- Screw By-pass SB

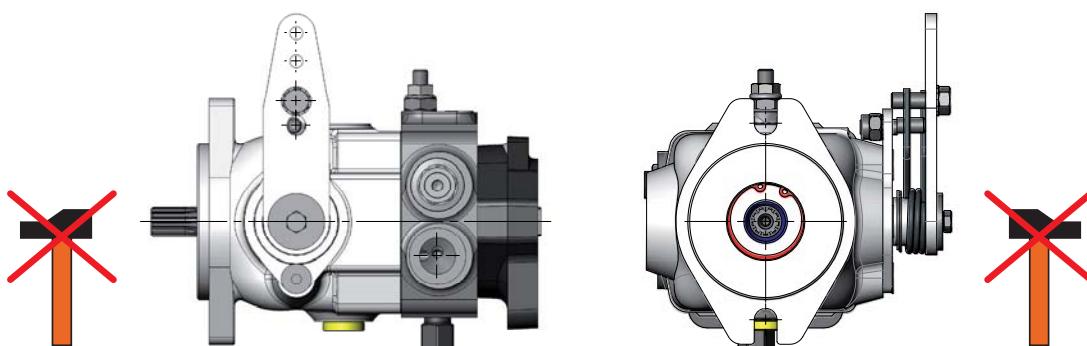

- Purge valve VS
- Adaptor flange from SAE-A to SAE-B FB
- Adaptor coupling Z = 9 / Z = 13 ST
- Purge valve + By-pass lever VSLB

First Starting

- Before starting fill all the system components with new and filtered oil.
- Verify that the boost pressure is correct.
- Restore the tank oil level.

Maintenance

- The first oil change must be made after approximately 500 hours of operation. In the following every 2000 hours.
- The filter cartridge must be replaced for the first time after 50 hours. In the following 500 hours; such time should be reduced if the filter clogging indicator shows that the cartridge is clogged or when the system works in a heavily polluted environment.

DM**DIRECT MECHANICAL WITHOUT CONTROL LEVER**

The change of pump displacement is given by clockwise or counter-clockwise rotation of the shaft of the swashplate.

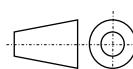

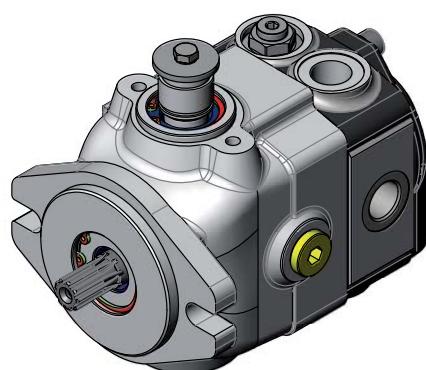

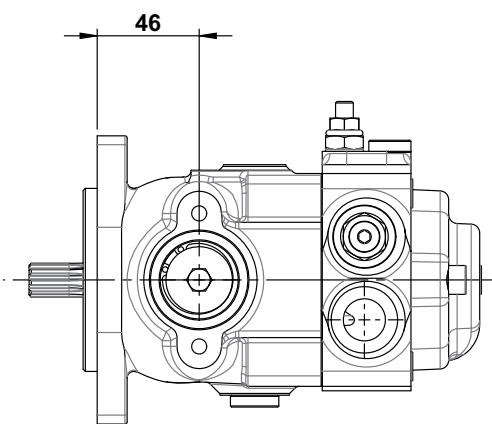

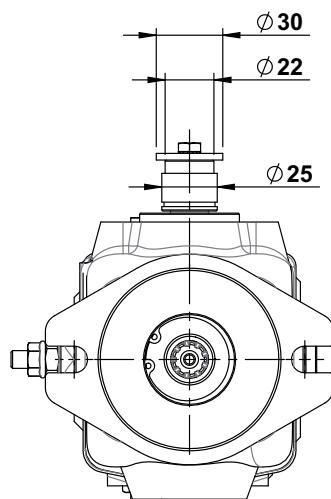

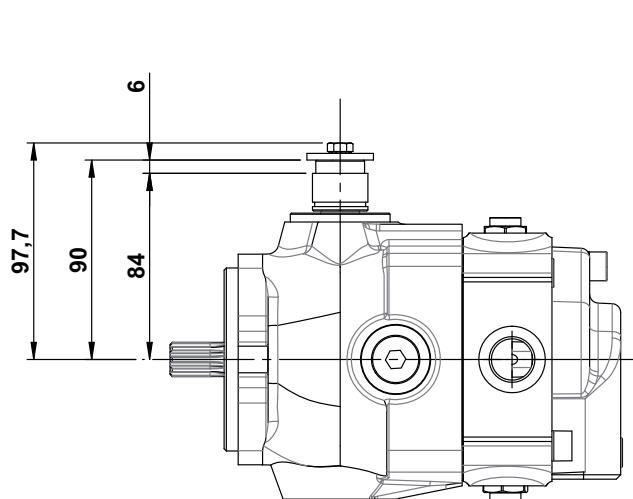

The shaft is directly linked with the swashplate.

BC**TAPERED BUSH**

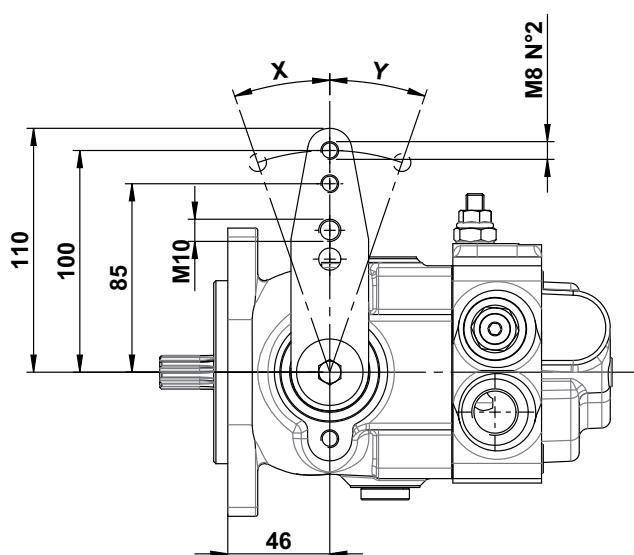

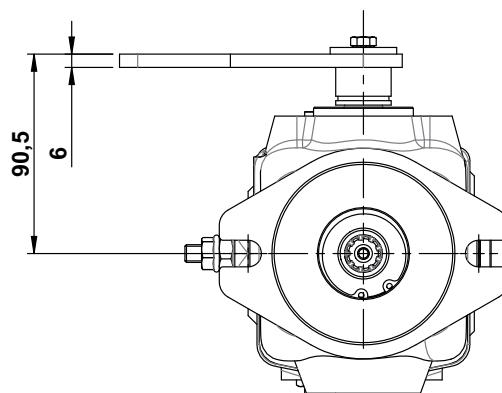

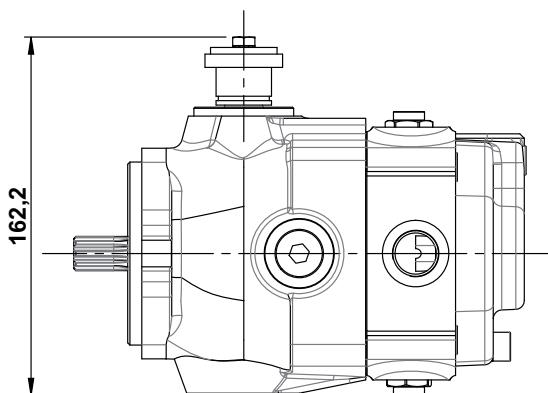

Tapered bush with woodruff key, external cylindric.

Suitable for arrangement of specific control levers.

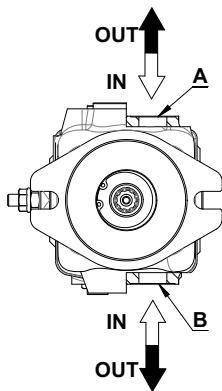

LC**DIRECT MECHANICAL CONTROL WITH LEVER**

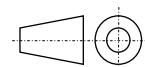

The pump displacement variation is given by clockwise or counter-clockwise movement of the lever. The lever shaft is directly linked to the swashplate.

**Lever Angle**

Pump Model	6 / 7	8 / 7	9 / 7	11 / 7	12 / 7	13 / 7	15 / 9	17 / 9	18 / 9	19 / 9	21 / 9

FLOW DIRECTION		PUMP		
Pump rotation		Lever position	OUT	IN
Clockwise CR		X Y	A B	B A
Counter-clockwise CC		X Y	B A	A B

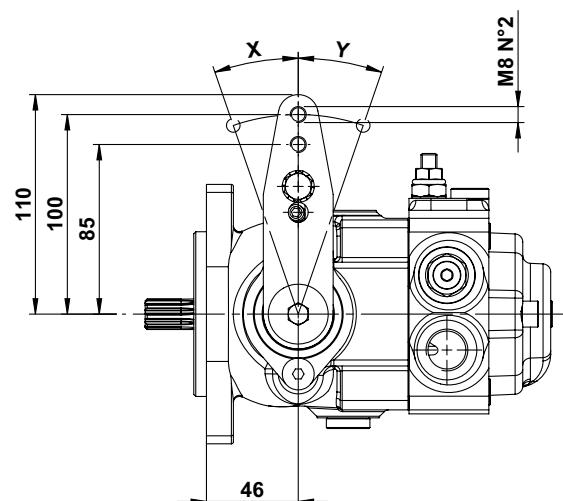

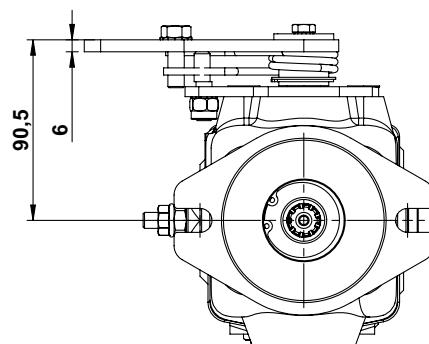

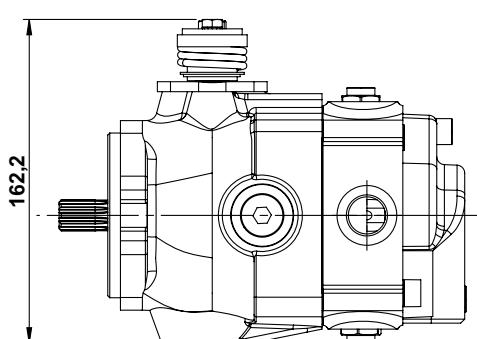

DMS**CONTROL LEVER WITH RETURN TO ZERO FLOW POSITION**

(torsion spring)

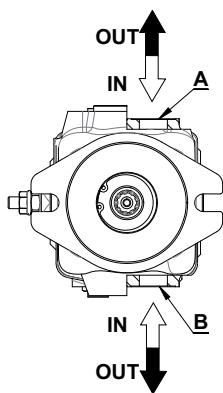

The pump displacement variation is given by a clockwise or counter-clockwise movement of the lever.

Return to zero flow is obtained by a spring which is part of the leverism.

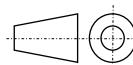

The lever shaft is directly linked to the swashplate.

**Lever Angle**

Pump Model	6 / 7	8 / 7	9 / 7	11 / 7	12 / 7	13 / 7	15 / 9	17 / 9	18 / 9	19 / 9	21 / 9

DMZ**CONTROL LEVER WITH RETURN TO ZERO FLOW POSITION**

(compression spring)

HYDRAULIC DIAGRAM

SHI**HYDRAULIC SERVO-CONTROL**

The variation in pump displacement is obtained by adjusting the pressure on the P1-P2 servo control connections by means of a hydraulic proportional joystick (containing pressure reducing valves).

The oil supply for the joystick can be obtained by taking pressure from the boost pump (G port), see pag. 10.

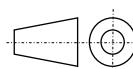

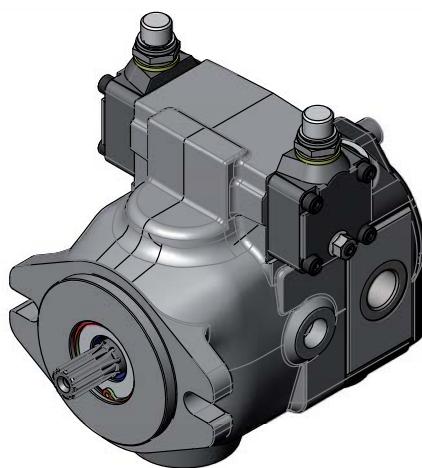

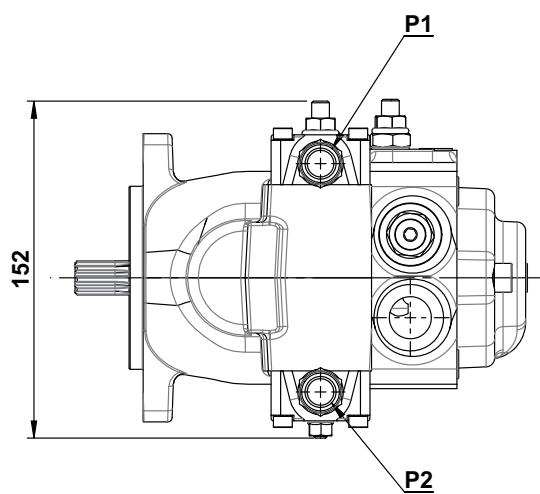

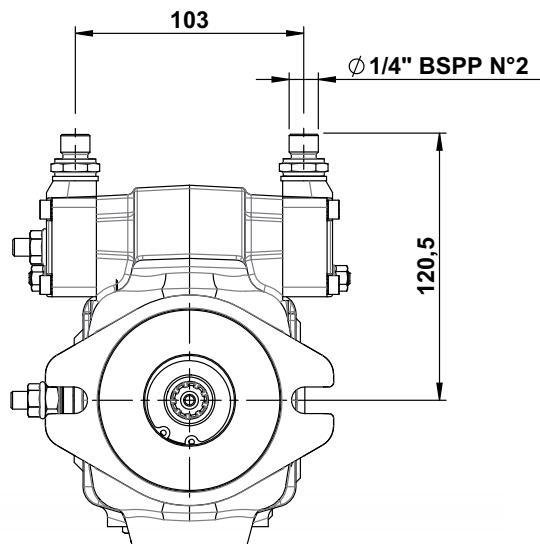

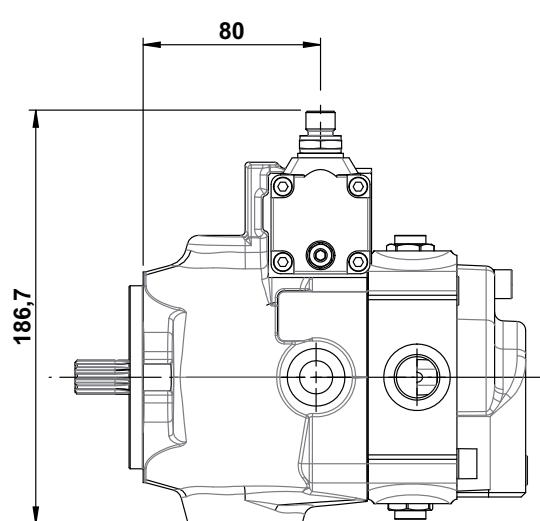

The servo control reacting time can be adju-

sted by inserting a restrictor on the joystick supply line ($0,5 \div 1,2$ mm).

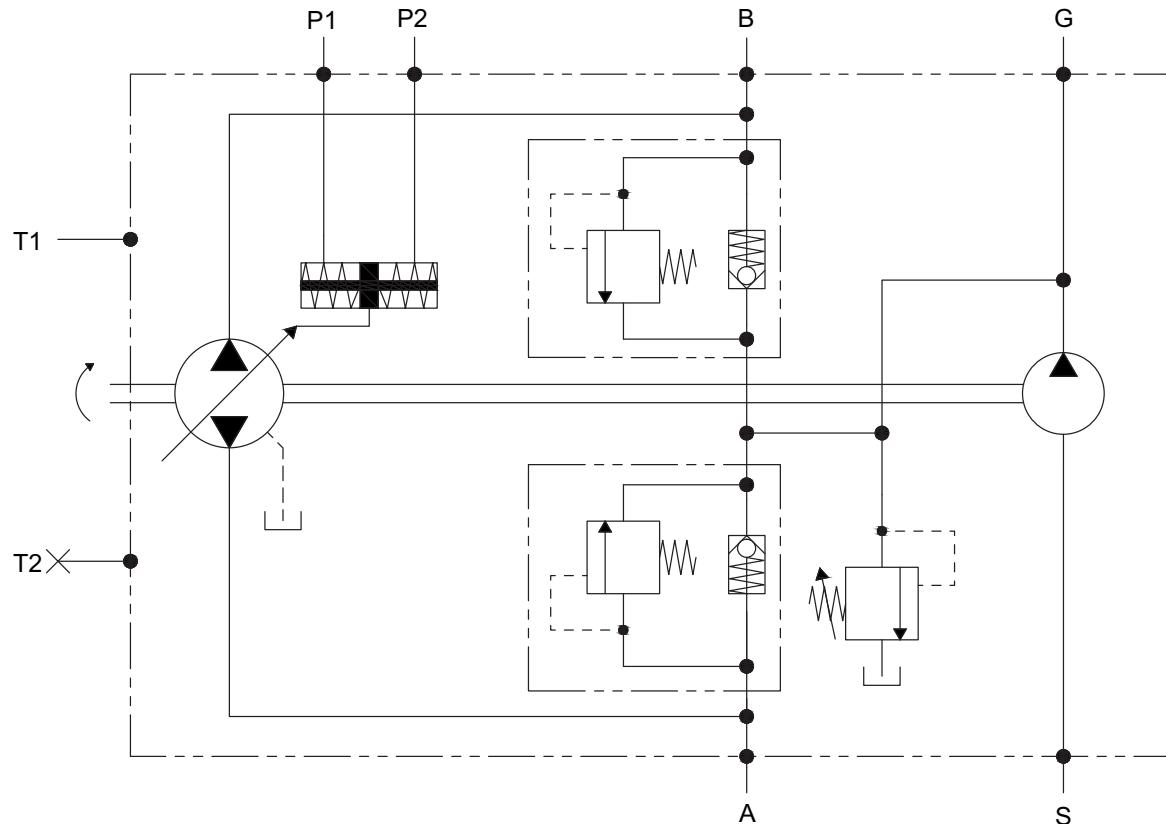

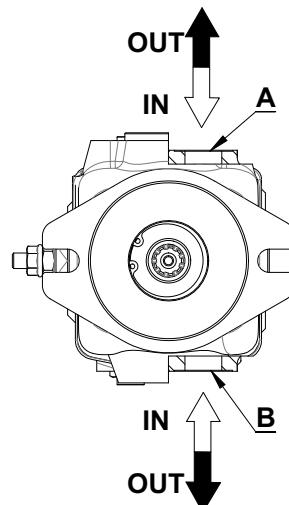

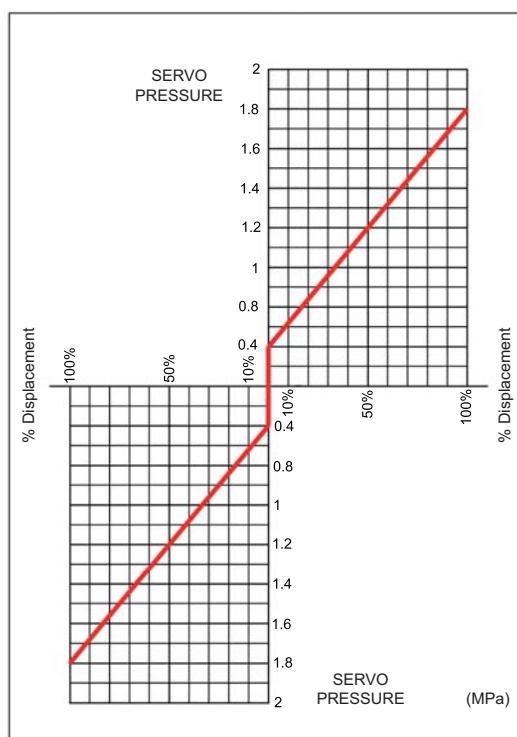

The servo control operation curve in both control directions goes from 0,4 to 1,8 MPa (tolerance $\pm 5\%$).

The adjustment curve of the hydraulic control system has to be wider ($0,3 \div 1,9$ MPa).

Suggested curves for HPV series Joysticks: CR062 (see HT 73/B/105/0417/E catalogue).

	72		4.100	4.000	68
	90		4.000		
	110		3.800		

Open Loop Axial Piston Pumps (Fixed Displacement) - 32-50 cc

Model	Displacement cm ³ /n.	Rated Pressure MPa	Peak Pressure MPa	Maximum speed n/min.	Weight kg (single pump)
TPF 60	35, 40, 46	35	42	2.800	20,5
	50		41	2.500	

Bent Axis Pumps - 12-130 cc

Model	Displacement cm ³ /n.	Rated Pressure MPa	Peak Pressure MPa	Maximum speed n/min.	Weight kg
TPB - TAP 70	12.6	35	40	3.300	7,5
	17.0			3.200	
	25.4			2.550	8,5
	34.2			2.250	
	41.2, 47.1			2.200	15,5
	56.0			2.100	
	63.6			2.050	
	83.6, 90.7, 108.0			1.700	
	130.0			1.600	29,5

The table values can change in function of the configuration.

As HANSA-TMP has a very extensive range of products and some products have a variety of applications, the information supplied may often only apply to specific situations.

If the catalogue does not supply all the information required, please contact HANSA-TMP.

In order to provide a comprehensive reply to queries we may require specific data regarding the proposed application.

Whilst every reasonable endeavour has been made to ensure accuracy, this publication cannot be considered to represent part of any contract, whether expressed or implied.

The data in this catalogue refers to the standard product. The policy of HANSA-TMP consists of a continuous improvement of its products. It reserves the right to change the specifications of the different products whenever necessary and without giving prior information.
