## Helical Hydraulic Rotary Actuators

# HB Series

## FEATURES

Helac Corporation's new HB Series is the result of over 15 years of manufacturing experience with sliding spline rotary actuators. Our original HP Series pivot actuators established the concepts of integrated shaft flanges with drilled and tapped bolt circles and large bearing capacities. The new HB Series actuators continue that tradition with their ability to support and carry heavy loads while providing tremendous output torque: integral, angular contact ball bearings support the shaft and eliminate the need for additional, external bearings.

The HB designs feature much smaller envelopes than our earlier sliding spline actuator designs. Steeper helix angles have reduced the length. Three housing styles and three shaft styles are offered, and every shaft can be fitted with every housing. All models are available in inch (HBI) and metric (HBM) versions. The nominal design pressure is 3000 PSI, and the burst pressure is in excess of 10000 PSI.

Standard rotations are 90°, 180°, and 360°. Rotations up to 10° over nominal can be provided at customer request.

Optional features include cushions, direct mounted dual pilot operated check valves, and stop tubes to achieve almost any non-standard rotation under 360°.

## OPERATING CHARACTERISTICS

The model number represents the nominal output torque of the actuator at 3000 PSI. For example, the HB-42K produces 42000 IN-LB of torque at 3000 PSI. The minimum operating pressure is 100 PSI and torque is a linear function of the system pressure.

HB Series actuators are not self-locking. However, a backdriving load will require a holding pressure of only about 50% of the pressure to drive the same load forward.

***Actuators are drawn and shipped at end of rotation following application of pressure to Port P2. As pressure is applied to Port P1, shafts will rotate in the direction indicated by the arrows in the end views.***

***End position accuracy is ±1°.***

## WARRANTY INFORMATION

HELAC CORPORATION warrants products manufactured by it to be free from defective material and factory workmanship. HELAC CORPORATION shall replace or repair such products, which under normal use and service, discloses such defects and return them repaired or replacement products to the purchaser prepaid with reports on defectiveness and remedial work rendered. Products under warranty shall be returned to HELAC CORPORATION's manufacturing facility at 225 Battersby Avenue, Enumclaw, Washington 98022, transportation prepaid by the purchaser, for inspection by HELAC CORPORATION whose opinion as to defects shall be conclusive.

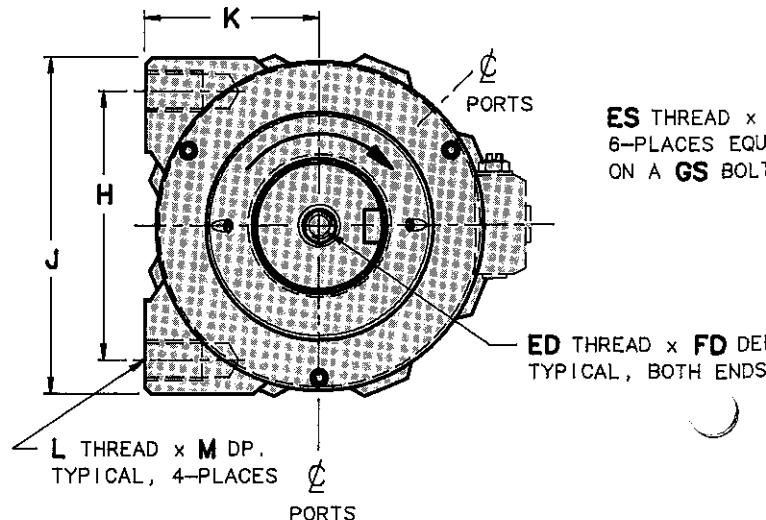

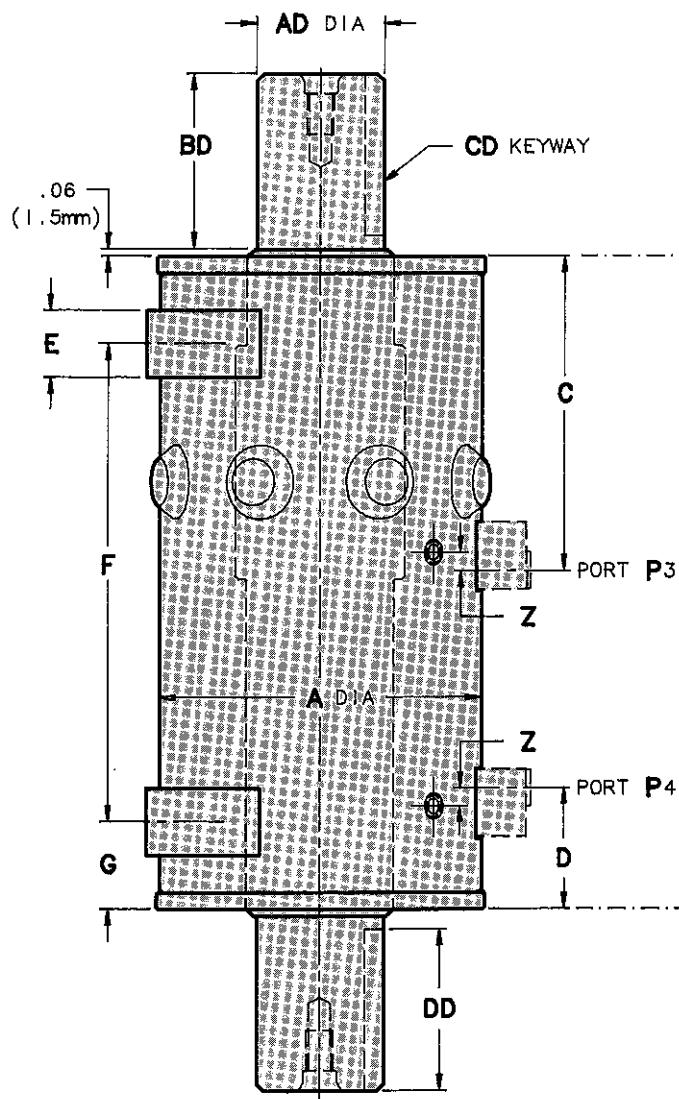

The warranty period shall be 12 months from the date of shipment from HELAC CORPORATION's manufacturing facility for HELAC CORPORATION approved applications. This warranty shall be voided as to any products which have been repaired, worked upon, or altered by persons not authorized by HELAC CORPORATION, or which have been subject to misuse, negligence, accident, or overload.

HELAC CORPORATION reserves the right to make changes in the design or construction of any of its products at any time without incurring any obligations to make changes or alterations in products previously sold.

This warranty is in lieu of all other and/or prior warranties, expressed or implied, and no other company or person is authorized to represent or assume for HELAC CORPORATION any liability in connection with the sale of HELAC CORPORATION products other than set forth herein. In no event shall HELAC CORPORATION be liable for any incidental or consequential damages. This includes, but is not limited to, operator use and/or neglect, incorrect design application, and structural failure of any components attached to a HELAC CORPORATION product.

# Selection Guide/Shaft and Housing Options

Three different shaft styles and three different housing styles are available for each size actuator in the HB Series (except HB-80K). Shafts and housings are completely interchangeable with each size actuator available in nine different configurations as illustrated below (180° models shown). Optional cushion blocks are included on all examples.

The HB Series is available in nine different shaft/housing combinations.

## 3 STANDARD SHAFT STYLES

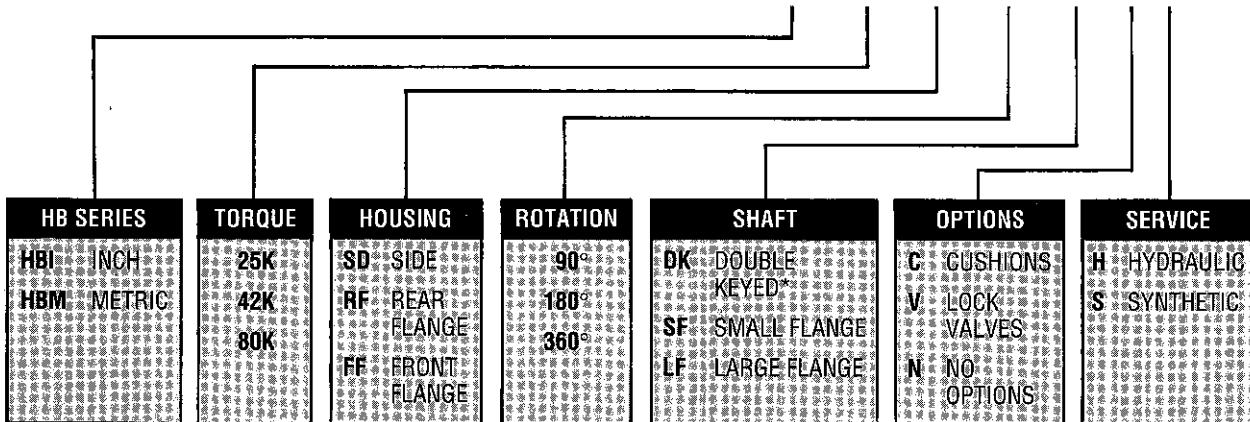

## 3 STANDARD HOUSING STYLES

SD HOUSING	RF HOUSING	FF HOUSING
Integral mounting feet with blind drilled and tapped holes.	Integral mounting flange with through drilled bolt circle. Flange located at rear of housing.	Integral mounting flange with through drilled bolt circle. Flange set back from front of housing.

<sup>(1)</sup> SD Housing with SF Shaft. Weights are greater for other configurations; consult factory.

<sup>(2)</sup> Based on bearing strength. Includes a 3:1 safety factor.

<sup>(3)</sup> Force applied in the plane of the shaft flange. Based on bearing strength. Includes a 3:1 safety factor.

<sup>(4)</sup> Based on the radial bearing capacity and strength of Grade 8 mounting bolts for 180° models. Must be reduced for 90° models. Includes a 3:1 safety factor.

<sup>(5)</sup> Based on the fatigue strength of Grade 8 bolts, and on fatigue strength of shaft. Includes a 3:1 safety factor.

<sup>(6)</sup> For shafts with through bores, tie rods can be used to substantially increase M3 and M4; consult factory.

All ratings are based on constant loading. For shock loads the permissible ratings must be reduced substantially based on the designer's experience, or consult factory.
